What is NUC?

NUC (Next Unit of Computing) is a mini-computer used for attaching to TVs in Agoda offices to display dashboards or signage as requested by users. It helps users monitor their dashboards in real-time using Grafana. Some teams also use it to advertise internal content to communicate with employees at each site.

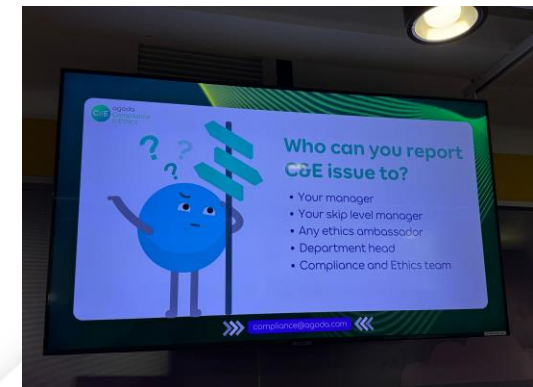

Users can remotely access the NUC using VNC applications like Rustdesk, while the GSD team can maintain it remotely using TeamViewer.

How to build NUC

1. Preparation hardware
2. Assign Autopilot profiles
3. Enroll machine
4. Check policy and apps

Preparation hardware

When preparing a machine for setup with a NUC, you have two options to consider. The first is the Intel NUC, a small PC ideal for attaching behind a TV. However, it may have performance and heating issues. The second option is the Dell OptiPlex, a medium-sized PC that offers higher performance than the Intel NUC but is larger in size and rarely faces heating issues. We recommend using the Dell OptiPlex as the next generation of NUC to minimize repair needs and optimize performance for your tasks.

Intel NUC

Dell OptiPlex

Preparation hardware

Before to using PC to NUC. Please install the Windows OS version which suitable for prepare it to NUC. The current version which we in-use is **Windows 10 LTSC**. The patch version is 21H2. Please use this version for least Windows patch.

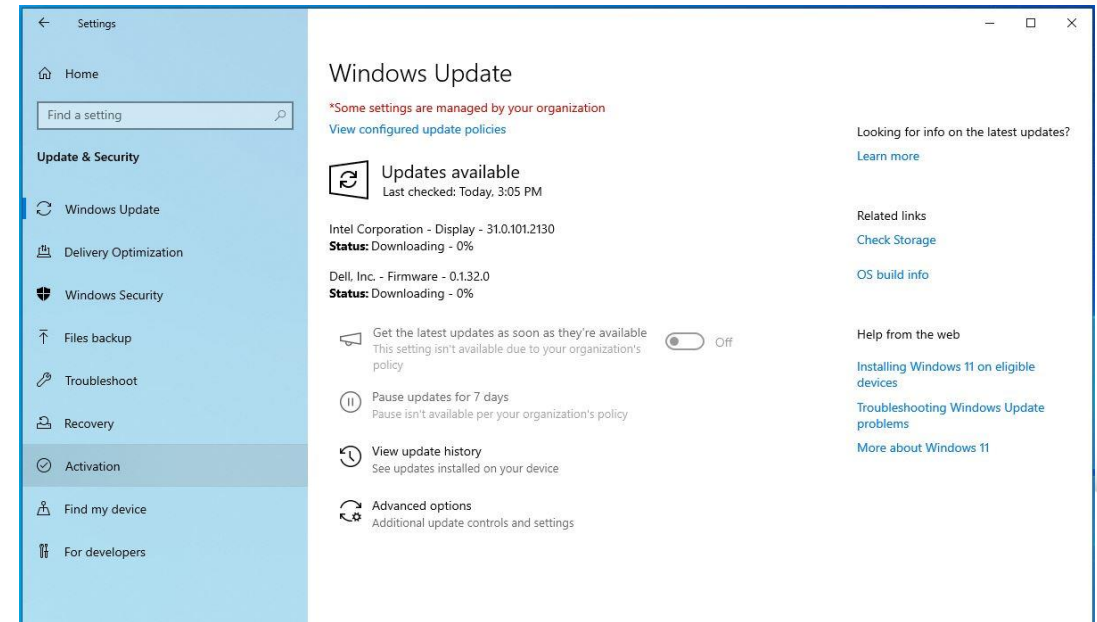

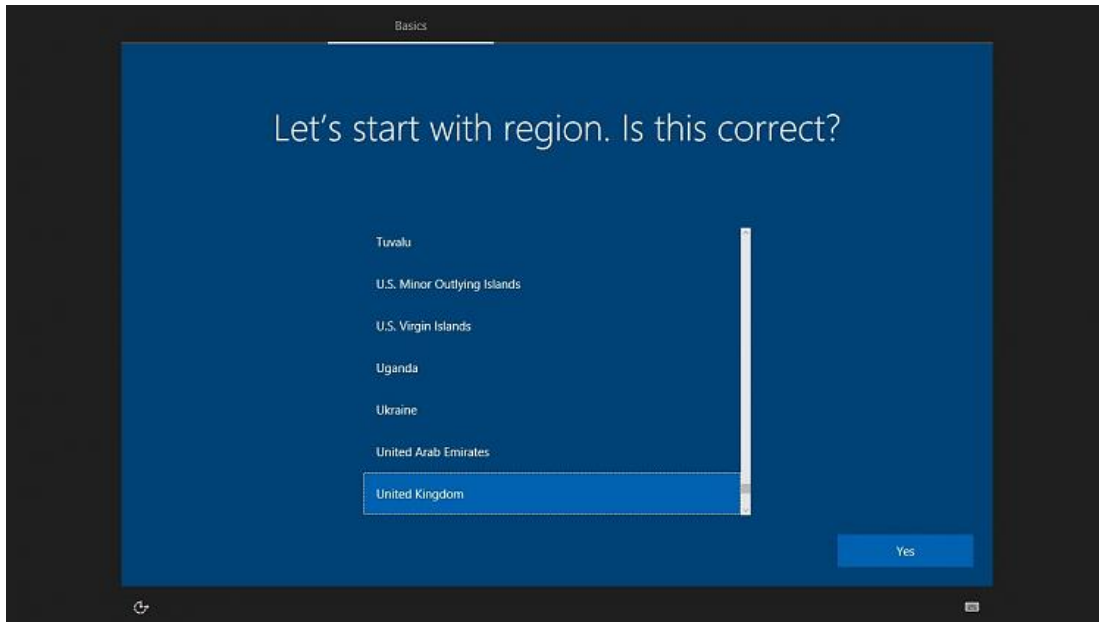

How to check the version of Windows OS.

Press Windows+R and type “winver”

Preparation hardware

After install Windows 10 LTSC on machine already. **Press Ctrl+Shift+F3** to skip the OOBE to access

Audit mode to updates Windows patches.

Assign Autopilot profiles

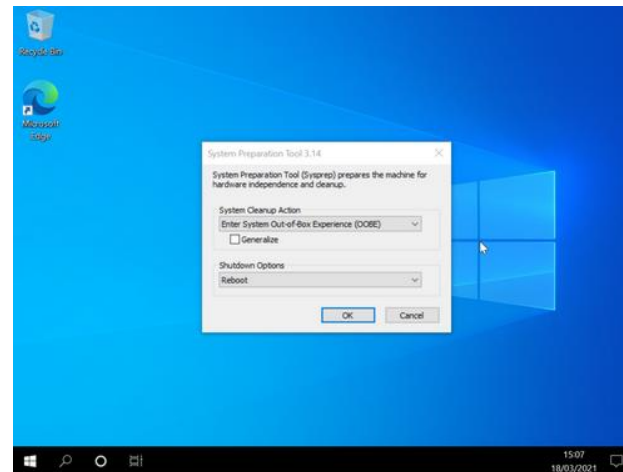

You can import the hardware ID of the machine to AzureAD tenant of Agoda by using PowerShell. Open PowerShell on that machine and write the script follow below and run it.

```
Set-ExecutionPolicy bypass  
Install-Script -name Get-WindowsAutopilotInfo -force  
Get-WindowsAutopilotInfo -Output C:\temp\Autopilot.csv
```

It's will require you login to enroll machine to Agoda tenant with Okta. After it added the machine to tenant already. Open Sysprep to exit for Audit mode and back to OOB screen.

Path

"C:\Windows\System32\Sysprep\sysprep.exe"

Assign Autopilot profiles

Return to the Intune page, navigate to the Autopilot section, and click "Import" to upload the CSV file, importing the hardware information to the Intune server. Wait for 10-15 minutes. After the serial number appears in Autopilot, assign the group tag “**Autopilot-NUC**”.

Add Autopilot devices

Windows Autopilot devices

Import Windows Autopilot devices from a .CSV file. When assigning users in the .CSV, make sure that you are assigning correct UPNs. [Learn more about formatting requirements here.](#)

Specify the path to the list you want to import.
"Autopilot_G7BLN2.csv"

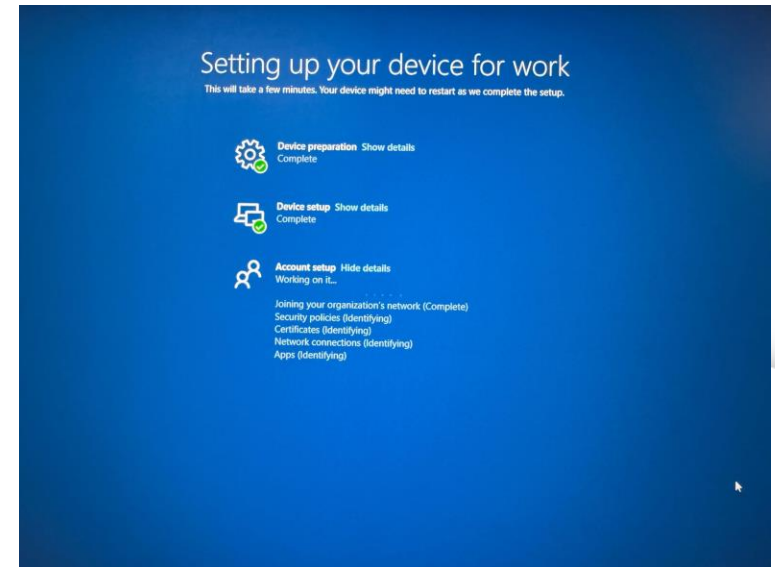

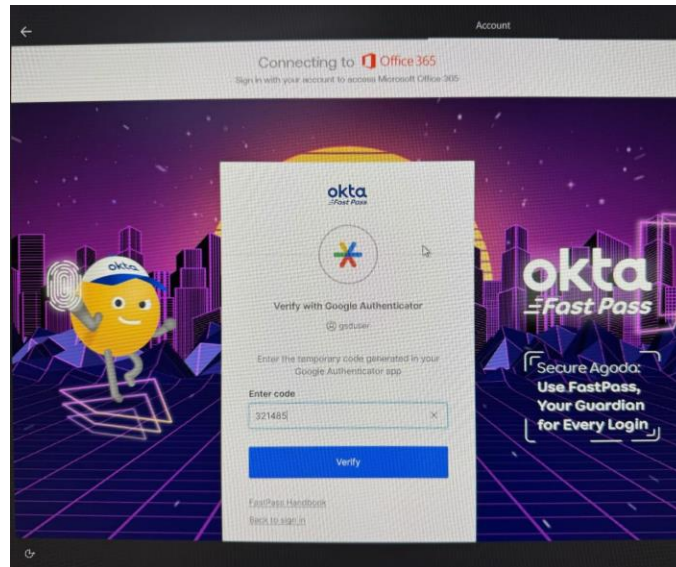

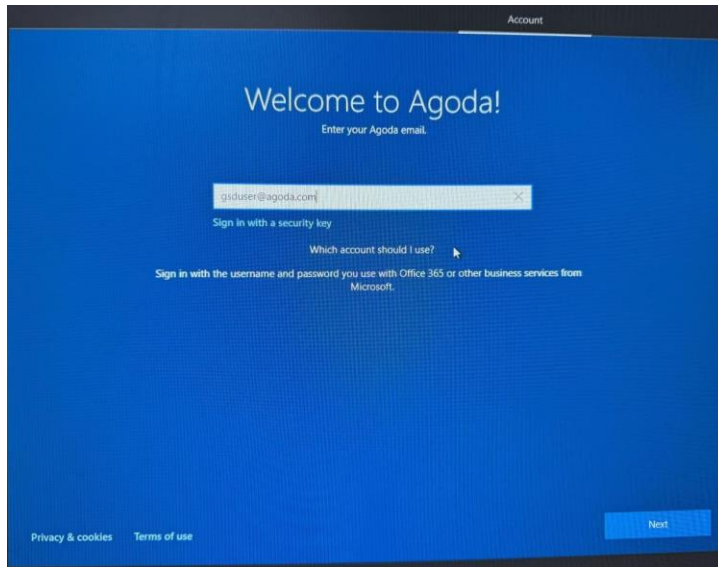

Formatting results
Total rows: 1
Rows formatted correctly: 1

Click import below to import your devices.

Import

Enroll machine

After out from Audit mode and back to OOB. It's will show welcome screen with Agoda. Fill the email **gsduser@agoda.com** and login Okta with **gsduser**. (It's will require OTP from 1Password) Then, it's will set up device and profiles for that machine. Waiting until show the Desktop screen.

Check policy and apps

After login successful, open Setting and click to **Account-> Access work or school**. Then, click Sync for pull the policy and install apps from server. After policy and apps installed. You can change the device name to the DV-XXX-XXX follow your site via Intune.

Pattern for naming

Locations where there're floors or branches

DV-**XXX****YYY**07-15

Locations where there're only one floor

DV-**XXX**-15

Site Name	City/Building Name	Floor number
The name format is an abbreviation of your site location or country.	The name format is an abbreviation of your building or city location.	If there are many floors, you can add the floor number on this.
Example Singapore = SIN Hungary = HUN London = LON	Example Tokyo= TYO Yokohama= YOK Osaka= OSA	No. of NUC No. of NUC in your offices or that floor.

Troubleshooting

Script enroll hardware ID to Agoda Tenant error

If you can't add machine to Agoda tenant and found the authentication like screenshot, you need to activate the **Intune-Role-GSD-L1-L2** role in Azure admin first. And trying to run command again for add it.

```
PS C:\Users\Administrator> Set-ExecutionPolicy bypass
Install-Script -name Get-WindowsAutoPilotInfo -force

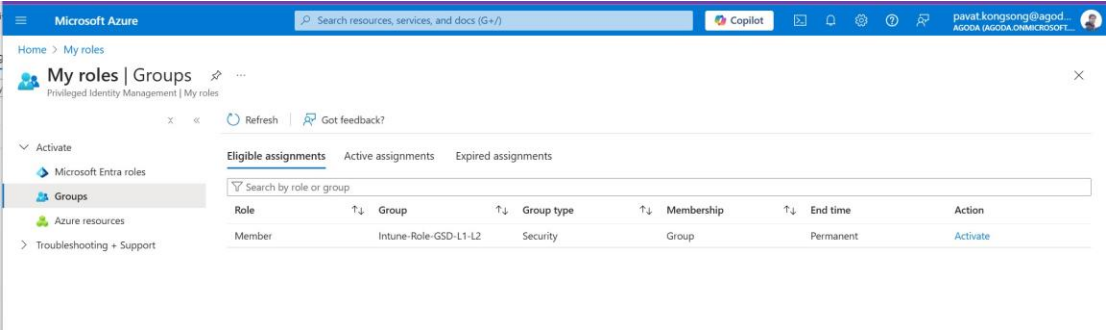

PS C:\Users\Administrator> Get-WindowsAutoPilotInfo -Online -GroupTag 'Autopilot-NUC' -Assign
Installing module WindowsAutopilotIntune

Login it-dataview from OOB is not working

When open machine and found OOB, normally we will login with **it-dataview@agoda.com** for set up that account to NUC. But the it-dataview account have issues to can't assign over 5 machine. That we won't login with that account. We recommend to using the **gsduser@agoda.com** to login instead.

MagicSign

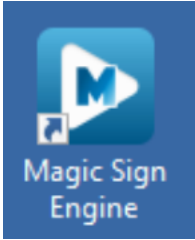

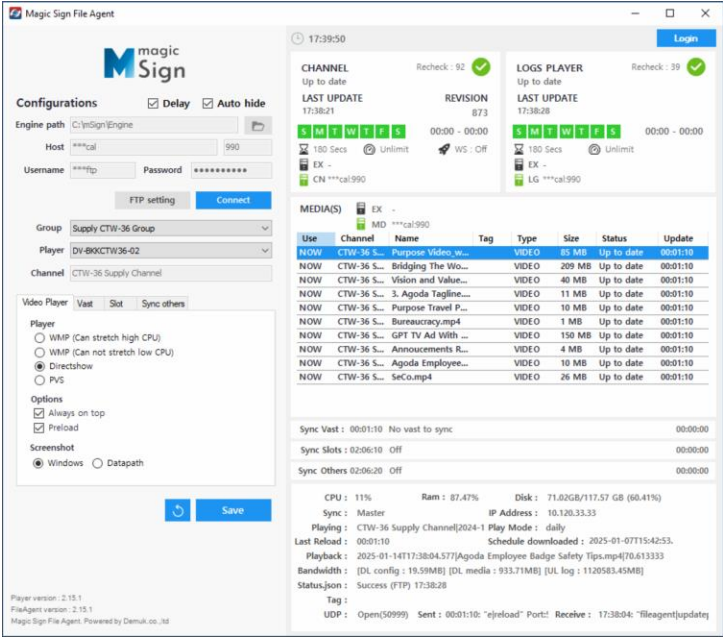

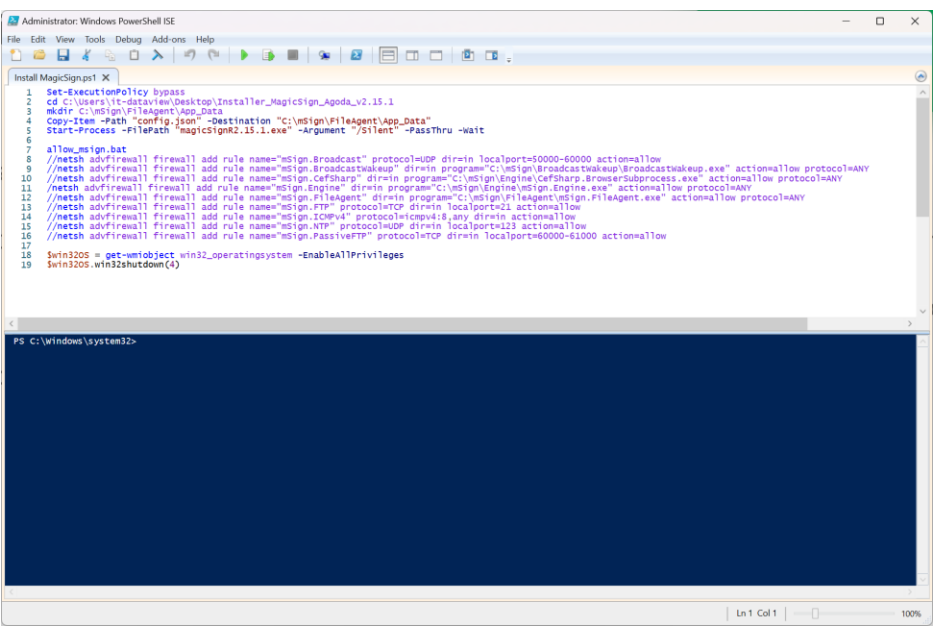

What is MagicSign?

MagicSign is a digital signage software designed to manage and display media for advertisements, functioning similarly to a notice board or billboard. This software is utilized to announce news or information by the internal communication team or for internal communications within each department, such as the CEG department or the IT department. It allows for precise control over the media displayed in each area.

How to install MagicSign?

You can install the MagicSign by download install from this [link](#) and install by using PowerShell command in that folder. After done to install, software will automatically run. You can select the device name and bind it to server for pull the media from server to play on this devices. Then run MagicSign Engine to run media player to play the content.
