01006557 PRACTICE UNDER PERSONAL AND PROFESSIONAL SKILLS 3

Academic Year 2026

Agoda Services Company Limited

193 One Bangkok Tower 5, 27th-33rd Floor, Wittayu Road, Lumpini, Pathum Wan, Bangkok 10330

Internship Topic/Department: Global Technical Support Internship

Responsible person: Mr. Jakkit Chaiwat

Student Info

Student Name: Napaul Intharasing

Student Number: 67011178

Study Year: 2

Industrial Relations Committee Names:

1. Asst. Prof. Kanut Tangtisanon

Program of Study: Engineering

Department: Computer Engineering (International Program)

Faculty of Engineering, King Mongkut's Institute of Technology Ladkrabang

Internship Period: 22 May 2026 - 31 July 2026

Total days of internship: 46 Days

Submitted Report Date:_____.

Submitted to: _____.

(_____)

Preface

This summer internship is a practical internship undertaken on a personal basis, as part of a General Education elective, rather than a requirement of the Computer Engineering curriculum. It was pursued out of personal interest, with the goal of gaining hands-on experience and developing practical skills in real-world information technology operations.

The intern undertook this internship in the position of IT Support / Device Deployment Technician, from May 22 to July 15, 2026, at Agoda. The role involved comprehensive IT support responsibilities, including device provisioning using the Microsoft Deployment Toolkit (MDT), IT asset management through the KACE system, ticket handling via the TARS support system, and hands-on hardware troubleshooting in coordination with Dell Support.

The main project assigned was the CSR Tech Camp Device Preparation Project, which involved hardware cleaning, secure data wiping, Windows imaging through MDT, and asset record updates in KACE for 31 Dell Precision 5570 devices — completed successfully at 100%. In addition, the intern contributed to the 32" Office-Wide Monitor Replacement Project and Project Keep Alive, a monitoring initiative using Uptime Kuma to detect and alert on video wall device failures.

Throughout the internship period, the intern gained practical exposure to enterprise IT tools and workflows, including device imaging and deployment, asset lifecycle management, hardware diagnostics, vendor escalation processes, and end-user support — all of which contributed to a strong foundation for future growth in IT operations and systems support roles.

CHAPTER 1: Introduction

1.1 Company Background

Agoda was founded in 2005 by Michael Kenny and Robert Rosenstein in Singapore, launching as an Asia-focused hotel booking platform. It was acquired by Booking Holdings in 2007, providing the capital to scale rapidly from thousands of listings to over 200,000 hotels by 2012.

Through the 2010s, Agoda evolved beyond hotels — adding Homes (2017), Flights (2019), and Activities (2021) — transforming from a hotel-booking site into a full travel marketplace. Strategic moves like acquiring Qlika (2014) and merging with Rocket Travel (2019) further broadened its reach.

Today, Agoda is one of Asia's leading travel technology companies, headquartered in Singapore with a Global Operations Center in Bangkok and 50+ offices worldwide. Its platform spans 6M+ properties, 130,000+ flight routes, and 300,000+ activities, under the purpose of "Bridging the World Through Travel."

1.2 Company Visions

Agoda has grown from two founders to over 5,000 employees today, guided by a shared set of values that unify the company across locations and teams. Its vision positions Agoda as the largest accommodation platform in Southeast Asia and a worldwide challenger, with an aspiration by 2030 to become the preferred Travel Marketplace in APAC — covering accommodation, flights, activities, and ground transport.

Agoda's competitive edge ("super powers") comes from being a tech-first company, embracing cultural diversity between East and West, mastering the ability to scale from small ideas to global operations, staying open to innovation and change, and leveraging the scale and resources of the Booking Holdings group. (Agoda Services Company Limited, 2025)

Core Cultural Values

- **Do things the right way** — Act with integrity, respect, and encourage speaking up
- **Move fast and be efficient** — Bias for action, avoid overthinking, reduce bureaucracy, stay flexible, and balance short- and long-term thinking
- **Be a scientist, experiment and measure** — Make data-driven decisions, stay curious, dive deep, and challenge past assumptions

- **Take ownership and make a difference** — Act like an owner, leave things better than you found them, learn from mistakes, and aim high
 - **Be direct and respectful** — Give honest feedback, stay humble, disagree openly but commit once decisions are made, and focus on constructive solutions (Agoda Services Company Limited, 2025)
-

CHAPTER 2: Details of my summer internship

2.1 My responsibilities

The intern was assigned to the IT Support team at Agoda, focusing on device provisioning, hardware troubleshooting, and end-user support. Key areas included Microsoft Deployment Toolkit (MDT) for imaging, KACE for asset management, TARS for ticketing, JAMF for MacBook builds, and Autopilot for Windows deployment.

2.1.1 My daily job routine

The intern's daily tasks included processing IT support tickets (walk-in requests, new hire orientations, end-of-life device replacements), preparing and configuring laptops using MDT and KACE, and providing hands-on hardware troubleshooting (cable, battery, trackpad, and screen issues). On a typical day, the intern handled approximately 5 devices or support tasks, combining new hire onboarding, device replacements, and monitor installation support.

Figure 1 User Laptop came in with CPU temperature problem

2.1.2 Other assigned job routine

Beyond daily tickets, the intern supported additional operational tasks such as coordinating with Dell support for warranty claims and hardware defects, assisting with new hire device orientation and training, maintaining accurate asset records in the KACE and TARS systems, and helping manage e-waste recycling for retired equipment.

Figure 2 User drop phones on their laptop

2.1.3 Project that you worked on

The intern worked on three main projects during the internship:

1. Device Preparation Project (Tech Camp) — Prepared 150 Dell Precision 5570 devices from start to finish, including hardware cleaning, secure data wiping, reimaging with the CSR Windows image via MDT, configuring MDT settings, and updating KACE records. Achieved 100% completion with zero deployment issues, finishing ahead of schedule.
2. 32" Monitor Replacement Project — Participated in an office-wide monitor upgrade, personally installing 30 new Dell P3223DE 4K monitors (out of 70+ installed by the 7-person team) across multiple office floors, including removal of old units, mounting, connectivity testing, and asset tracking.

Figure 3 Broken Monitor that I replaced with new one

3. Project Keep Alive (WallKeeper monitoring system) — Set up a monitoring and alerting system for the video wall NUC machines using Uptime Kuma on Proxmox, to detect when a device goes offline or its dashboard freezes and notify IT by email. Built and tested the setup on a prototype test bed (2 Dell OptiPlex units) before planning rollout to the live video wall NUCs.

2.2 Summary of work I have done during internship

Topics	June				July			
	1 st week	2 nd week	3 rd week	4 th week	1 st week	2 nd week	3 rd week	4 th week
1. Job Training / Orientation	←→							
2. Tech Camp Device Preparation	←				→			
3. New Hire Onboarding & Support	←							→
4. Hardware Troubleshooting		←						→
5. IT Support Ticket Handling		←						→

Table 1 Topics during internship program

2.3 Steps for completing your Project

2.3.1 Device Preparation Project (CSR Tech Camp)

1. Cleaned hardware and performed secure data wipe on each device
2. Reimaged devices with the CSR Windows image using the MDT server Removed old monitors and mounted new displays at each desk
3. Configured MDT deployment settings for each device
4. Updated KACE asset management system with serial numbers and asset tags
5. Verified each device (boot check, OS confirmation, MDT/KACE record accuracy)
6. Completed final audit and certified all 31 devices ready for deployment

2.3.2 32" Monitor Replacement Project

1. Received and tested new Dell P3223DE monitors (power, display, USB-C, dead-pixel checks)
2. Coordinated installation schedule with department managers to minimize downtime
3. Removed old monitors and mounted new displays at each desk
4. Tested connectivity and configured ergonomic/height settings for each user
5. Staged old monitors for e-waste recycling via Dell take-back program
6. Updated asset tracking (TARS) with removed and newly installed monitor serial numbers

2.3.3 Project Keep Alive (WallKeeper monitoring system)

1. Set up test bed using 2 Dell OptiPlex units to prototype the monitoring pipeline safely
2. Provisioned Uptime Kuma on a Proxmox LXC as the monitoring host
3. Configured ping monitors (detects offline devices) and HTTP monitors (detects frozen dashboards)
4. Tested failure scenarios (offline, freeze, recovery) on the test bed to validate alerts
5. Documented setup and prepared the system for rollout to the live video wall NUCs

2.4 Others points you like to include in the report

Gained hands-on experience across multiple IT domains — device provisioning, hardware troubleshooting, asset management, and monitoring/alerting systems — beyond a single fixed task.

Learned to manage several projects in parallel (device prep, monitor rollout, and ticket support) while maintaining consistent daily output.

Developed practical vendor coordination skills through Dell support escalations for warranty claims and hardware defects.

Improved problem-solving skills by diagnosing hardware vs. software issues and deciding when to repair on-site versus escalate.

Built foundational knowledge of monitoring tools (Uptime Kuma, Prometheus, Grafana) that extended beyond routine support tasks into infrastructure monitoring.

Internship provided a realistic view of enterprise IT operations, including ticketing systems (TARS), asset management (KACE), and structured deployment processes (MDT).

CHAPTER 3: Conclusion

This internship in the role of IT Support / Device Deployment Technician gave the intern direct, hands-on experience in enterprise infrastructure operations, particularly in device provisioning, imaging, hardware troubleshooting, and asset management — core functions that support the daily operations of a large-scale organization.

The assigned work covered a wide range of responsibilities, from foundational training in service desk systems (TARS), asset management (KACE), and deployment tools (MDT, Autopilot, JAMF), to executing a full-scale device preparation project (31 devices) and a company-wide 32" monitor replacement rollout (70+ units). The intern also handled real, live support tickets — including new hire onboarding, end-of-life replacements, and hardware failure diagnostics — while contributing to a monitoring project (Project Keep Alive) using Uptime Kuma to detect device and dashboard failures.

Figure 4 Laptop with broken pre-provisioning process

Figure 5 Device with heat problem

3.1 Skills Gained from This Internship

- Ability to prepare, image, and deploy laptops at scale using MDT, KACE, and standard imaging workflows
- Hands-on hardware troubleshooting skills (cable, battery, trackpad, and display issues) and vendor escalation with Dell support
- Understanding of IT asset lifecycle management, from procurement through end-of-life replacement
- Experience coordinating multi-person projects (monitor rollout) alongside daily ticket-based support
- Exposure to monitoring and alerting concepts through the Project Keep Alive initiative
- Improved communication with mentors/supervisors and end users, and the ability to manage multiple parallel tasks under real deadlines

From this experience, the intern is confident that the knowledge and skills gained will serve as a strong foundation for future growth in IT operations, systems deployment, or infrastructure support roles.

CHAPTER 4: Problems, Suggestions, Improvement

4.1 Problems

Working on-site with a fixed daily device quota required careful time management, since device preparation (cleaning, wiping, reimaging, KACE updates) had to be balanced with unplanned incoming support tickets (walk-ins, urgent P1 cases) on the same day. This meant the intern often had to reprioritize tasks in real time.

Some tasks depended on hardware availability and vendor turnaround (e.g., waiting on Dell for defective batches or replacement parts), which occasionally delayed case closure and required the intern to manage multiple in-progress tickets simultaneously.

As the intern had limited prior hands-on experience with enterprise deployment tools (MDT, KACE, JAMF) before the internship, the early weeks required intensive self-learning during training sessions to keep pace with real operational demands.

4.2 Suggestions

To manage the volume of tasks, the intern kept a clear daily log of device status (cleaned, wiped, reimaged, verified) to avoid duplication or missed steps, and used the KACE system consistently to track progress accurately.

When facing unfamiliar tools or issues, the intern applied a clear diagnostic approach — assess whether an issue was fixable on-site (e.g., water spill, dust cleaning) or required vendor escalation (e.g., broken screen, hardware failure) — which reduced wasted time and ensured consistent, correct resolutions.

4.3 Improvement

This internship provided an opportunity to build practical, real-world experience in enterprise IT operations — device deployment, asset management, and end-user support — beyond what is typically taught in a classroom setting. Balancing a large-scale project (device preparation, monitor rollout) with day-to-day ticket handling helped the intern develop both technical execution skills and soft skills such as time management, prioritization, and clear communication with users and mentors.

The intern found that consistent documentation (ticket updates, asset records) and a structured, step-by-step approach were key to completing large projects successfully and ahead of schedule. This experience reinforced that with a solid process and willingness to learn new tools, one can adapt

effectively to real operational environments — and that hands-on experience with live systems and real users offers valuable lessons that go beyond technical skill alone.
